

Why Do an NHA?

The only way to specify a business computing solution that's right for you is a detailed, in-person evaluation. An NHA is how we get to know your business and computing needs and requirements.

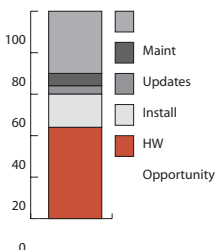

An Afinity NHA provides you with a comprehensive view of your network - its strengths, weaknesses, opportunities and threats. It gives you the information you need to make sound business decisions.

What's IT Really Costing You? ^{EE}

Most business owners don't realize how much their current network is really costing them.

Research data from Gartner Group indicates that 84% of network / IT costs are related to ongoing support, maintenance and training. Non-standard networks that require ongoing tweaks and adjustments cost a business 30-50% more than standardized networks. Well-designed, well managed networks don't need a weekly visit from a costly, onsite technician. They can be monitored and managed remotely saving you significant IT budget dollars.

Afinity helps you get the most from your network.

What You Get from an NHA

Once your assessment is completed, Afinity will provide an executive review of your existing network, your goals and Afinity's recommendations for not only reaching those goals, but also creating a network that runs flawlessly all day, every day.

As a part of our solution proposal, you'll get:

- An inventory of your existing hardware.
- A summary of applications on your network.
- An evaluation of existing hardware and network components - you'll know what items can be reused and what items should go.
- A list of potential security concerns (adware, spyware, viruses), if any, and disaster recovery recommendations.
- Recommendations to get you to a stable, secure, reliable network including proactive services to prevent problems before they happen.

Microsoft Gold Certified

As a Microsoft Gold Certified Partner, **Afinity has the expertise you want in an IT partner.**

Our certified techs know Microsoft networks and continually maintain their certifications via Microsoft education and re-certification programs.

If a business interruption occurs, Afinity can, within minutes, have the highest level of Microsoft Technical Support Team working directly on your system to solve even the stickiest problems. Something other resellers can't access.

Solutions Designed by Afinity

Afinity has been designing and supporting business networks for over 20 years. **We currently support more than 200 California firms with more than 300 servers and over 4,000 users.** We are continually developing more efficient and cost effective deployment and support strategies and methods. This gives us a unique capability to combine enterprise-like services with business focused applications and solutions.

Afinity Network Solutions:

- A standardized business network with automated updates and server monitoring that can be remotely supported.
- A stable platform that will run your business and practice management applications.

How is a Network Health Assessment Done?

An Afinity Network Health Assessment or NHA is a complete assessment of your network.

The NHA is completed in three parts:

1. A short initial consultation to gather information about your daily use of the network, the applications you use and any problems you may be experiencing that prevent you from getting work done. 
2. One of our trained technicians will complete a detailed network inventory of the software and hardware in use in your office. Our technicians take a few minutes to run a simple inventory utility on each desktop or laptop computer. For servers, we inspect your server configuration and applications - no utilities are installed on servers. 
3. After our technical experts analyze the results of the NHA, we will provide you with recommendations on how to increase your firm's efficiency by achieving a secure, cost-effective and reliable network. 

In total, a Network Health Assessment should take approximately two hours for a firm or company with 20 users.
