

IT Solutions That Simply Work

Defender Security Proactive Tiered Security Solution

Features

- **Tier One: SPAM and Anti-Virus Prescreening from Postini**
SPAM and Virus prescreening is the first step to email efficiency and security. Time spent examining and deleting SPAM each day is time and money wasted. With Defender, our partner Postini filters your incoming Internet e-mail to remove Spam and Viruses BEFORE it reaches your system. Your clean and safe e-mail is then passed on to you.
- **Tier Two: SonicWall Firewall**
The industry leading SonicWall firewall is installed between your system and the Internet. By securing the holes through which hackers, worms and robots attack your system, the threat of unwanted intrusion is eliminated.
- **Tier Three: Symantec MultiTier Anti-Malware Software**
Powerful, efficient Symantec Anti-Malware software is installed on your servers and desktops. Starting at the core of your network, this comprehensive package protects your servers, e-mail system and desktops from current and even emerging threats.
- **Tier Four: Software Update Service**
Afinety's Software Update Service applies the Microsoft critical updates required to complete the protection required in today's connected world. This key component to the Defender strategy is a piece that many businesses ignore.
- **Tier Five: Regular Afinety Alerts**
Once the Defender Solution is installed, you will receive Afinety Alerts for any emerging threats that might affect your system. By keeping on top of new and potentially damaging attacks that effect your business, you'll be prepared at all times.

Benefits

- **Peace of Mind**
If you're like most small and medium size business owners, you know or suspect that your business has IT security issues and exposures. With Defender, you can feel confident that these issues have been proactively addressed and your company data is secure.
- **Reasonable and Cost Effective Strategy**
The Defender security solution has been designed to offer the finest security features and capabilities for a small or medium size business. You get the security you need at a budget you can afford.

Product Overview

Internet and network security has received significant attention in the business and technology press. Connections to the Internet are an absolute business necessity today. Your computer system is exposed to a barrage of outside influences that are constantly seeking new and more innovative ways to attack your computers. SPAM and Viruses are a constant threat to business data and resources. Without a reasonable and effective security strategy, small business owners leave themselves open to significant legal and financial risks. A single desktop infection often costs more than the entire Defender solution that would have prevented it.

Defender is a five-tiered Network Security Solution that combines everything a small business needs to secure it's network and ensure computer resources are available all day, every day.

Prior to a Defender security solution installation, Afinety recommends a network assessment to evaluate your network systems performance and vulnerability issues. Assessment results determine the details of the Defender solution. Afinety recommends only what is necessary to secure your particular network. Nothing can protect you absolutely but with Defender installed, you will have the very best chance of keeping your firm's data safe and secure.

Afinety delivers complete IT solutions to small and medium businesses. We provide industry leading hardware, software and security solutions. Our unique monitoring and remote plus onsite support strategy delivers Fortune 500 quality IT services at affordable prices.
